

Fastest Recovery... Maximum Protection

Continuous Data Protection Solutions for the SMB

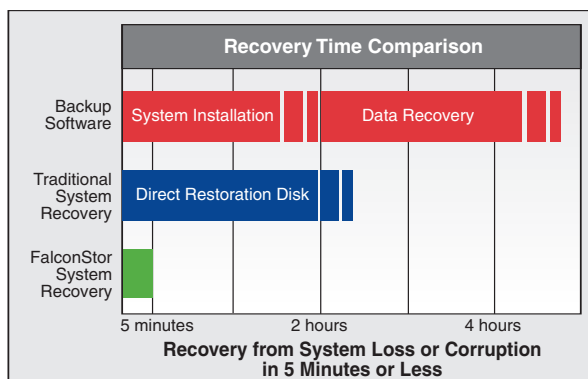

With the continuous business operations and dramatic data growth, traditional once-a-day tape backup and subsequent laborious recovery can easily cause long down-time and negatively impact business. Moreover, your traditional backup only protects data. So if your system disk becomes damaged, you are faced with the huge task of configuring it up all over again, before you can resume business. Businesses need to backup all of their data and systems, and more frequently, but how?

State of the Art, Enterprise Protection for the SMB

FalconStor has collaborated with trusted partners to solve these problems with the FalconStor CDP Solution. Integrated with FalconStor's CDP software, this Data Protection Solution provides SMB's an industry proven solution with Enterprise level features. It is a powerful, easy to use disk-based solution, for continuous backup and rapid recovery, with complete data integrity. It takes minutes to install into your existing network environment. And, it not only protects your data files, but all of your systems, applications and databases and even the entire site with minimal disruption.

Data and System Recovery in 5 Minutes or Less

FalconStor's CDP solution offers continuous backup and snapshots are always accessible, reducing recovery time to minutes. And since your data is backed up continuously, it virtually eliminates data loss. In the case of a complete system loss, FalconStor system recovery options restores your system in minutes so you begin operations from your backup disk without re-installation.

Total Protection for Your Database and Email

To protect your data base or email system with full transaction integrity, FalconStor application-specific agents put your active files in a stable state so they can be backed up. This makes sure all your information can be recovered quickly without a lengthy re-build. For Exchange administrators, a Message Recovery wizard simplifies the process of message or mailbox level recovery without impacting email service.

"Now I do not worry...Recovering a file is ridiculously easy. It is so great not to have to go through a tape archive to find data. It only takes 30 seconds to do a restore. The product was the best one, at the best price that easily fit into our budget."

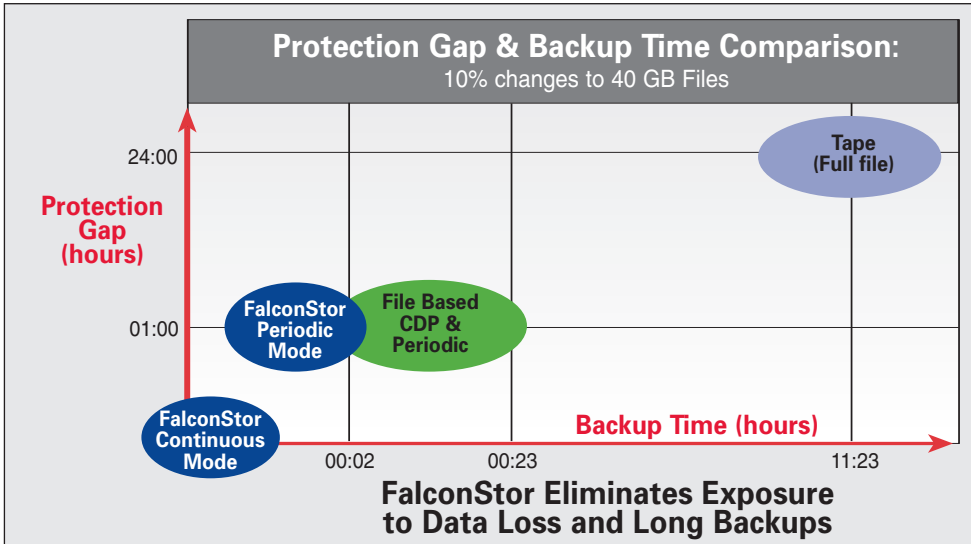

*- Dan Brinegar, Software Specialist
House of LaRose Leading
Anheuser-Busch/Budweiser Distributor*

BENEFITS

- Fastest data and system recovery in 5 minutes or less
- Continuously backs up data, not just once a day
- One solution protects files, databases, email and systems
- Backup anytime, without impact to the production environment
- Turnkey solutions from trusted providers that are easy to use and maintain, and install
- Scalable to meet needs of growing businesses
- Off-site Disaster Recovery Protection

FEATURES

- Continuous or periodic backup with instant snapshot-based recovery
- Granular recovery points from week, day, hour, minute
- Multiple recovery options: block, file, volume, disk or whole system
- Administrator or end user initiated recovery with point and click ease
- Recover from total system loss or corruption in minutes with system recovery options (Recovery CD, PXE Boot or HBA Boot)
- Application integration with Microsoft Exchange, SQL Server, Windows, Oracle, Sybase, IBM Lotus Notes/Domino for 100% data integrity
- Secure, encrypted offsite Disaster Recovery with PrimeVault™
- Scales up to 9 TB as a Software Appliance Kit (SAK)
- Available as a FalconStor certified appliance or as a Software Appliance Kit
- Windows Server 2003r certified, listed on the Windows Server Catalog of Tested Products

Backup Anytime with Windowless Backup

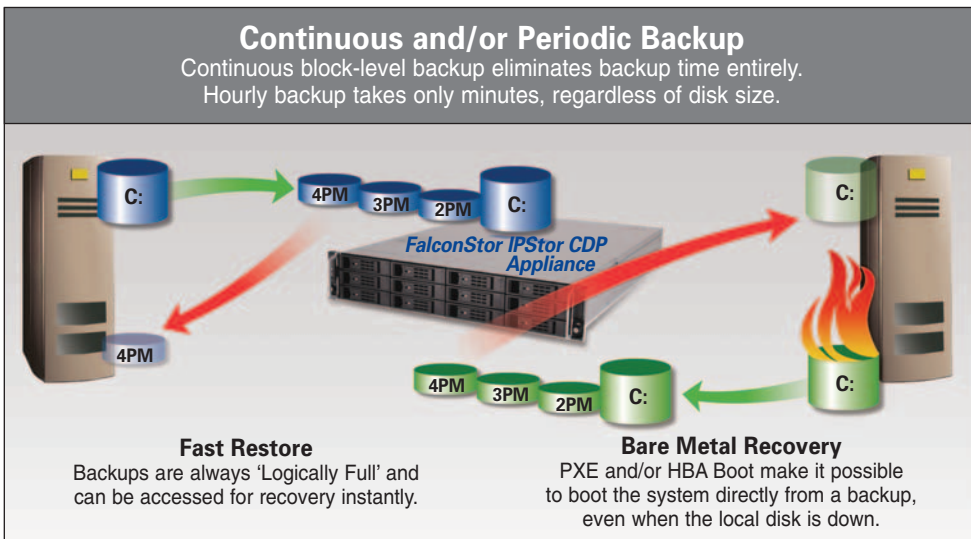

With the FalconStor CDP Solution for protection, traditional backup processes can be eliminated from each server. Continuously delivering every write to the Appliance is equivalent to having a full backup every second without interrupting production. FalconStor then delivers the snapshots to your backup server so that backup to tape can be performed at any time – no need for windows, no impact to production.

Maximum Protection Against Disasters

The FalconStor CDP Solution efficiently protects your company's data from a disaster situation. It replicates the changes to your data across an IP network to a remote site in a secure encrypted fashion. The CDP solution makes efficient use of the network and storage by eliminating redundant writes that clog other systems. This minimizes the cost of storage and the burden on the network.

"With Falconstor Continuous Data Protection we do not have to worry about email problems due to crashed servers"
